

Year 6 - STEM Day

19th November 2021

LO: Can I learn about renewable and non-renewable energy?

Today was STEM day. We were taught by many different teachers carrying out different workshops related to energy. In year 6, we listened to the story 'Energy Island' by Allan Drummond. It was about the island of Samsø in Denmark. It is now the home of the Samsø Energy Academy, a learning centre where scientists and scholars from all over the world come to exchange ideas about energy conservation.

We discussed the story and then watched a news clip on the real energy island Samsø in Denmark. Then the children thought about ways in which they can learn from the story for their own lives.

On Energy Island they grow Rapeseed oil flowers and use them as oil for cars and trucks. - Harvey

It was amazing how much they achieved together as an island in saving energy. - Edward
